

Is a perfect lawn REALLY worth the risk?

To our **CHILDREN**

- **Children's brains and bodies are still growing and so they're disproportionately affected**
- **Children are exposed as they play on the grass**
- **Pesticides are tracked into the house, so they're exposed to pesticides inside, too**
- **Probable links to cancer, birth defects, neurotoxicity, kidney/liver problems etc. etc.**
- **Pesticides are even found in breast milk!**
